Outsource IT systems activities and focus on innovation.

The mark of an effective IT business leader is the ability to prioritize what is most important; the delivery of efficient core business application management and IT innovation. IT leaders focusing on these key areas are able to deliver unique competitive advantage and drive business growth. However, that coupled with day-to-day IT management leads more of them to realize that sometimes they can't do it all.

When managing your own network infrastructure doesn't save time, money or deliver the optimal performance you need, look to SE IT Services. When you choose to partner with SE, you'll find the freedom to focus your internal IT resources on more strategic initiatives along with the financial and operational efficiencies that make for some serious peace of mind.

- Find comfort in a predictable and affordable budget.

- Reduce the cost of IT delivery and management.

- Select services and solutions that fit your business needs.

- Access the latest technologies and highly trained IT staff.

- Deliver reliable network uptime through an outsourced delivery model.

- Share the risk with a proven IT business partner.

Are your IT dollars giving you a competitive advantage?

How can your business grow if you had a reliable network delivering good user experiences backed by a team of highly skilled IT professionals? Can you use the IT staff you already have to drive business value and innovation rather than focusing on day-to-day infrastructure tasks?

With SE Essentials, you can achieve operational efficiency through remote management without sacrificing a strong IT infrastructure. SE Essentials offers:

- Predictable, per-user, per-month IT support cost
- Industry leading service level agreement (SLA) for incident response
- 24x7 monitoring, remediation and patching services
- Protection with a comprehensive layered security approach
- Consistent, proactive network administration
- Reliable end-user support

93% of IT leaders feel they can bring more business value by focusing on service delivery and not IT infrastructure tasks.

Predictable Uptime at a Predictable Cost

Systems Engineering performs a thorough assessment of your network and makes recommendations to bring systems in-line with current best practices. In this assessment, we can address any end-of-life components and provide plans to migrate data and applications. Once your assessment is complete, the SE team takes over your day-to-day maintenance and support of your network and applications* so you can get back to focusing on what's important: growing your business.

* Supported line of business applications as designated by the client.
